## 1 Selecting the lane rental network

Each street across County Durham was given a congestion measure using the traffic impact calculations, which could then be used to establish the most congested sections of the network, i.e. top % by ordering the streets based on the measured impact.

Streets for a lane rental network were chosen using a combination of both the traffic analysis and extensive experience of network management within the Council. The Council also sought to identify routes across County Durham within the most congested section of the network to ensure the application of lane rental considered end-to-end journeys and provided network resilience.

The resulting lane rental network comprises 185 streets as detailed the map and table below.

### 1.1 Percentage of network length with Lane Rental

Government Guidance is specific that DfT expects lane rental to cover between 5% and 10% of an authority's network where it is being operated by an individual authority. It is noted that the derivation of the network percentage is not specified.

It is recognised that this guidance is predicated on lane rental schemes approved and operating in Kent, Surrey and West Sussex, whilst the lane rental scheme within Transport for London applies to 68% of its road network as it operates the strategic road network in Greater London.

In County Durham the lane rental network will cover 6.6% of our overall network coverage.

## 1.2 Plan of the Lane Rental Network
